

**FOR IMMEDIATE RELEASE**

**April 26, 2011 Toronto**

Health Canada has just approved The Canary System™, an early caries mapping and detection system, for sale in Canada.

“We will be open for business at the ODA Show April 28-30,” announced Lisa Crossley, CEO of The Canary System’s manufacturer, Quantum Dental Technologies.

“We’ve been contacted by many dental professionals wanting to know when The Canary System would be available for sale, and now that we have Health Canada’s approval we are looking forward to getting The Canary System into dental offices across Canada,” said President and Founder, Dr. Stephen Abrams, DDS. “We invite dentists, hygienists and attendees to visit us at Booth #1640 at the ODA Spring Meeting in Toronto. Come see The Canary System in action and learn how this powerful tool can change the way you detect and treat caries.”

THE CANARY SYSTEM is powered by PTR-LUM – a revolutionary new tool that can detect, map and monitor carious lesions on any tooth surface -- earlier and more accurately than ever before.

The Canary System is a low-powered laser-based device that uses a novel combination of heat and light to directly examine the crystal structure of teeth and map areas of tooth decay. The Canary System’s interactive software and printed patient reports engage patients in their own oral healthcare like never before.

For those who cannot attend the ODA ASM, please visit [www.thecanarysystem.com](http://www.thecanarysystem.com) <<http://www.thecanarysystem.com/>> or email [info@thecanarysystem.com](mailto:info@thecanarysystem.com) <<mailto:info@thecanarysystem.com>> to request additional information.
